Stress Reduces Yield

“Tough Year” might be an understatement. One thing is for sure, too much rain and too much heat in some areas and droughty weather in others..... stress reduces yield. The one thing we can say is that our growers, as tough as the year is, really need to focus on stress management for these crops. Any time a crop is stressed, stimulating the root system can be very beneficial. With all the recent calls and questions, we have made a brief summary of recommendations we have been making for different crops at different stages. These recommendations are based on the following information.

PercPlus helps seedling plants to better maintain their normal early development.

With **Boron Plus** we can make an effort to hold fruit on the plant.

CropKarb contains both of the above as well as our **Potassium Plus** that is designed to supplement the crop during bulking or fruiting.

Stressed Seedling Crops: Apply 16 to 24 ounces per acre of **PercPlus**.

Waterlogged R-2 to R-3 Soybeans: Apply 6 Oz **Boron Plus** with 12-16 Oz **PercPlus**.

Heavily Fruited Soybeans or Cotton: Apply 32 Oz **CropKarb** twice over 10-14 days.

Drought Stricken Heavily Fruited Crops: Apply 32 Oz **PercPlus**.
