DeltAg Product Brief

June 15, 2012

Summer of Extreme Variables Proven Products Proven Results

While it seems that things are going very well in some areas and for some farms, there are others that are having fits over the lack of rain and this most inconsistent weather pattern.

This crop year started out as good as any I have seen in my 35 plus years, but now it seems more and more issues are arising every day and in many different areas. Here at DeltAg, we have been receiving calls and photos on chlorosis caused by nutritional issues, burn from the use of harsh chemicals, hail damage, rain saturated soils creating nitrogen issues, soybeans and peanuts not properly nodulating, nitrogen loss due to extreme watering or extreme rain...and more.

There are many crop situations that may never actually be diagnosed with a definite cause. However, at DeltAg, we have found that treating the symptoms, most of the time, will eliminate the problem for that crop year and return yield potential to the crop. Frankly, DeltAg is good at helping pull crops out of these situations. While that ability has helped grow our business, we have also shown growers that with the DeltAg product ***“An ounce of prevention is worth a pound of cure”***.

There are many new companies with products, larger established distributors with new products and all kinds of great claims... Why not use proven products that have been around for over 20 years...**DeltAg**. The message here; *Stick with what you know and with products you have seen work!*

DeltAg's **PercPlus** is certainly not new, but to date, we do not believe there is anything out there that will perform as consistently as it will, especially on stressed crops. **Seedling Chlorosis...PercPlus! Drought Stress...PercPlus! Compaction Issues...PercPlus!**

With stressed crops during blooming, fruiting or sizing....use DeltAg's **CropKarb**. While the name and the final product are fairly new, the chemistry and the use of the contents are NOT new. We have utilized **PercPlus** along with our **Potassium Plus** and **Boron Plus** for years in a tank mix with excellent results in these later stages of crop development. **CropKarb** is the same product chemistry, but in one formula and one container. Results on healthy crops as well as those needing help have been more than we could have ever expected. Frankly, the results are so strong, they surprise us at DeltAg and we are still finding new methods and ways to take advantage of this great combination product.....**CropKarb**.

Concerned with herbicide injury when chasing resistant weeds.....Either of these products, **PercPlus** or **CropKarb** will help keep your crop on track.....and will support crop health at the same time....So why use some new or unproven product with “claims”, when you have access to something that works and has performed for years. If we can help.....call us today! It's what we do!

“It's not what you put out, but what gets in the plant.....that counts!”
