

"IT'S NOT WHAT YOU PUT OUT,  
BUT WHAT GETS IN THE PLANT....

*That Counts!"*

DeltAg utilizes nutrient formulations to improve crop health & yield with growers across the United States & internationally. We believe in "Improving Plant Performance" by treating the SOIL, SEED & PLANT. While not necessary as a three part program, many have learned that to treat all three builds overall crop potential.

All DeltAg products are formulated, packaged & shipped from our facilities in Greenville, Mississippi. Our products are distributed through major distributors associated with agriculture, home & garden, turf & wildlife. Our staff works closely with our distributors & retail clients.

Since 1976

## BIOSTIMULANTS

**Soil Solution**

**Seed Coat** (Dry)

**PercPlus** (Plant Power)

**CropKarb** 8-0-18 0.375% B

**Tomorrow's Crop  
Nutrient  
Chemistry...  
Today!**

## MACRO-NUTRIENTS

**Potassium Plus** 28% K

**Calcium Plus** 8% Ca

**Magnesium Plus** 4% Mg

**Sulfur Plus** 10% S

## MICRO-NUTRIENTS

**Boron Plus** 5% B

**Copper Plus** 5% Cu

**Iron Plus** 5% Fe

**Manganese Plus** 10% Mn

**Zinc Plus** 10% Zn

**MicroVite Combo**  
2% Mg, 5.7% S, 1% Cu, 1% Mn, 4% Zn

PRODUCT APPLICATION RATES	Product pH	Agricultural Fields				Home Use	Commercial Grower	Injector Rates

\*Refer to Label or DeltAg Rep for more rate information\*  
\*\*Soil Solution typically, one or two applications is considered ample.  
\*\*\*MicroVite at 6 Oz Injected is closest to recommended rates for each nutrient.

All Available in  
5 Gal Case (2.5 X 2)  
& 275 Gal Tote

**Are DeltAg Products Safe?**  
*Yes!* There are no harsh chemicals associated with the formulation of these products. They are nutrient based and should be handled as any other fertilizer materials.

**Who can use these products?** DeltAg's products perform on any soil, seed or plant. DeltAg's products can be used in agriculture, orchards, vineyards, greenhouses, turf, food plots, trees & even native vegetation.

# BIOSTIMULANTS

## Soil Solution™

**Recycle More Residue & Aerate Soils** - Soils depend on microorganisms (*microflora*) for plants to have healthy growth. Active *microflora* add oxygen & convert purchased nutrients to forms that plants can use. Without oxygen, all soils become compacted, tight, hard & dry. *Soil Solution* is designed to help *microflora* to more easily feed on crop residue for quicker composting. *Soil Solution* feeds the bacteria & more bacterial activity means more oxygen, better digestion of old crop residue, more nutrient availability, more water holding capacity & better yields.

# MACRO-NUTRIENTS

(Supplemental)

## Potassium Plus

In row crops, *Potassium Plus* is applied with side-dress liquids & with fungicides in mid to late season. Always dilute *Potassium Plus* in water before adding other products to avoid excess foaming. In turf, *Potassium Plus* is applied overhead to aid turf appearance.

# MICRO-NUTRIENTS

(Single Source)

The products listed below are designed to provide ample micro-nutrients for crop development & recommended rates are considered to provide complete needs rather than as supplemental application rates.

## Boron Plus

*Boron Plus* is very effective in holding more blooms in stressed conditions such as water shock or severe drought.

Also available in One Gallon (1x4)

## Zinc Plus

*Zinc Plus* is utilized on crops that require supplemental zinc or when zinc metabolism is blocked. (Corn, Rice, Pecans, etc.)

Also available in One Gallon (1x4)

## Seed Coat

More Uniform Stand

*Seed Coat* is a dry blend of nutrients applied to seed at planting. *Seed Coat* is specifically designed to give young plants more support to get out of the ground and growing. *Seed Coat* may be applied to any seed in row crops, gardens, yards, pastures, overseeding or food plots. It is All Natural & environmentally friendly.

## Calcium Plus

*Calcium Plus* is also used in situations when high pH is an issue or with a history of poor response to nitrogen. Always check for compatibility.

## Copper Plus

*Copper Plus* is an excellent tool to supply copper when deficiency symptoms surface.

## PercPlus (Plant Power)

*PercPlus* is designed to be applied to growing plants to aid overall plant health & build tolerance to environmental stress. *PercPlus* may be applied to row crops, trees/orchards, gardens, pot plants, turf & even native vegetation.

It may be applied on seed, in-furrow, foliar, side-dressed, injected, impregnated or hand sprayed.

## CropKarb

*CropKarb* combines *Potassium Plus*, *Boron Plus* & *PercPlus* & is a replacement for the same exact product delivery at a lower overall application rate. *CropKarb* is designed to be applied during fruit sizing and bulking.

## Magnesium Plus

Apply *Magnesium Plus* with *PercPlus* when leaf chlorosis is present in seedling row crops.

## Iron Plus

*Iron Plus* is often utilized in situations where turf crops are showing chlorosis.

## Sulfur Plus

Good plant response to nitrogen requires ample sulfur. Release sulfur from organic matter & improve crop response to nitrogen with *Sulfur Plus*. You can also utilize *Sulfur Plus* when growth media has a high pH.

## Manganese Plus

*Manganese Plus* is often utilized when manganese metabolism has been blocked. (glyphosate in soybeans)

## THE DELTAG SYSTEM APPROACH

*DeltAg's* approach is the use of formulations that influence plant metabolism, resulting in improved nutrient efficiency & healthier plant development.

## BUILD HEALTHY PLANTS.... FROM THE GROUND UP!

**Versatility:** Many growers across the country have discovered the many methods of utilizing *DeltAg* products & their great benefits. They are the most versatile in the industry:

- |                  |              |
|------------------|--------------|
| Soil Application | Foliar       |
| In-Furrow        | Injection    |
| Side Dress       | Impregnation |
| Dribble          | Fertigation  |
