

Potassium Plus Foliar ON COTTON

University of Arkansas - Keiser, AR

* Soil was treated with a preplant application of one (1) pound actual boron and seventy(70) units of potassium from KCl preplant on all five randomized plots.

NOTE: Cotton was treated with *Potassium Plus* and/or *Boron Plus* as a foliar application tank-mixed with insecticide and water. First applications were made July 30th and following one week later which would be approaching peak bloom on May 10th planted cotton. Data represents averages of five random plots.
